Art Unit: 2826

DETAILED ACTION

Allowable Subject Matter

- 1. Claims 5, 7-10, and 12-21 allowed
- 1. Claims 4 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 2 and 3 rejected under 35 U.S.C. 103(a) as being unpatentable over Mitani (JP 60148163) in view of Naem et al. (4,476,475) further in view of Malhi et al. (5,225,697) further in view of Lee et al. (6,509,601)

Regarding Claims 2 and 2, Mitani discloses a semiconductor memory device where in Fig 2, recrystallized polysilicon film 4, capacitor electrode 11, electrode 8, and insulating layer 10 are disclosed. Mitani fails to disclose recrystallized polysilicon layer being over the gate electrode, capacitor being over the recrystallized polysilicon layer and the required silicide capacitor electrode. However, Naem et al. disclose a stacked MOS transistor where in Fig. 1, recrystallized polysilicon layer 28 os located over gate electrode 24. Furthermore, Malhi et al. disclose DRAM cell and method where in column 1 and Fig. 2, capacitor is located over the recrysallized polysilicon layer. Finally,

Lee et al. disclose a semiconductor memory device having a capacitor protection layer and method for manufacturing the same where in claims 8 and 10, the required cobalt silicide capacitor electrode is disclosed.

Page 3

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required gate electrode/recrystallized polysilicon layer, the recrystallized polysilicon and capacitor electrode relationship and the required silicide capacitor electrode in Mitani as taught by Naem et al., Malhi et al. and Lee et al. respectively in order to have a semiconductor device with increased reliability.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fazli Erdem whose telephone number is (571) 272-1914. The examiner can normally be reached on M - F 8:00 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on (571) 272-1915. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
